ACV (42 Macquarie Street, Barton ACT 2600) stating Certificate No. and Veterinarian No.

Rectal palpation is a highly accurate means of detecting pregnancy in cattle. There may be some cattle in the NOT DETECTABLY PREGNANT GROUP that will be less than 6 weeks pregnant, a stage when pregnancy is difficult to detect manually. There will be an overlap between the 'pregnant' groups of up to one month either way. THE RESULTS OF THIS CERTIFICATE APPLY TO THE DATE OF THE EXAMINATION and no responsibility can be taken for any subsequent events that may contribute to the loss of the foetus, nor can this certificate guarantee that any animal will give birth to a live full-term calf.
